## Virtual Network Communication Solutions

**Infosec offers management solutions for electrical protection in virtualized environments.**  
**Virtualization aims to improve the availability and uninterrupted service of companies.**

### High availability of equipment

The Infosec virtualized environment management solution **improves and optimizes the performance of equipment protected by an INFOSEC UPS System™.**

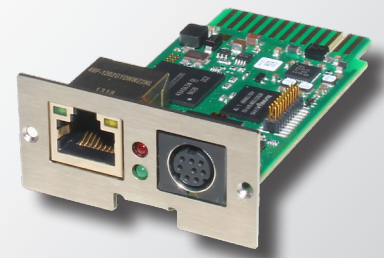

Indeed, a server managed in a virtual environment can **dynamically answer the problems of the IT network.**

In order to benefit from electrical protection, which guarantees the expected **continuity of service**, the UPS protecting the virtual environment must be «expanded» by an SNMP card capable of **communicating with the RCCMD software and managing the virtual servers** as well as the physical servers.

## INFOSEC SOLUTION

### SNMP vm Minislot card

For **Online UPS**, the Minislot SNMP vm card (P/N 61142, optional) allows **communication with virtualization devices** (vmWare ©, Hyper V, etc.).

### RCCMD client software

The RCCMD client software is an appliance (virtual machine) that can be used to **configure and manage the protection of virtual servers protected by an INFOSEC UPS System™** equipped with the SNMP vm Minislot card. An RCCMD client software license accompanies each SNMP vm Minislot card.

**Compatible with** the following virtualized environments :

- vmWare 6.0, 6.5, 6.7
- Windows Server 2016 et HyperV 2016

Allows you to easily **configure and manage** :

- general monitoring of the status of the UPS
- scheduled start-ups and shutdowns of the UPS
- alert messages (by email)
- “clean” shutdown the applications in progress
- shutdown virtual servers
- shutdown the physical servers
- restarting the physical servers
- etc ...

## A kit easy to install and configure

The Infosec solution is composed of two inseparable elements :

- **SNMP vm Minislot card** that must be physically installed on the selected UPS (the card to be installed in the slot «smart slot»)
- **RCCMD client software** to be downloaded and installed next

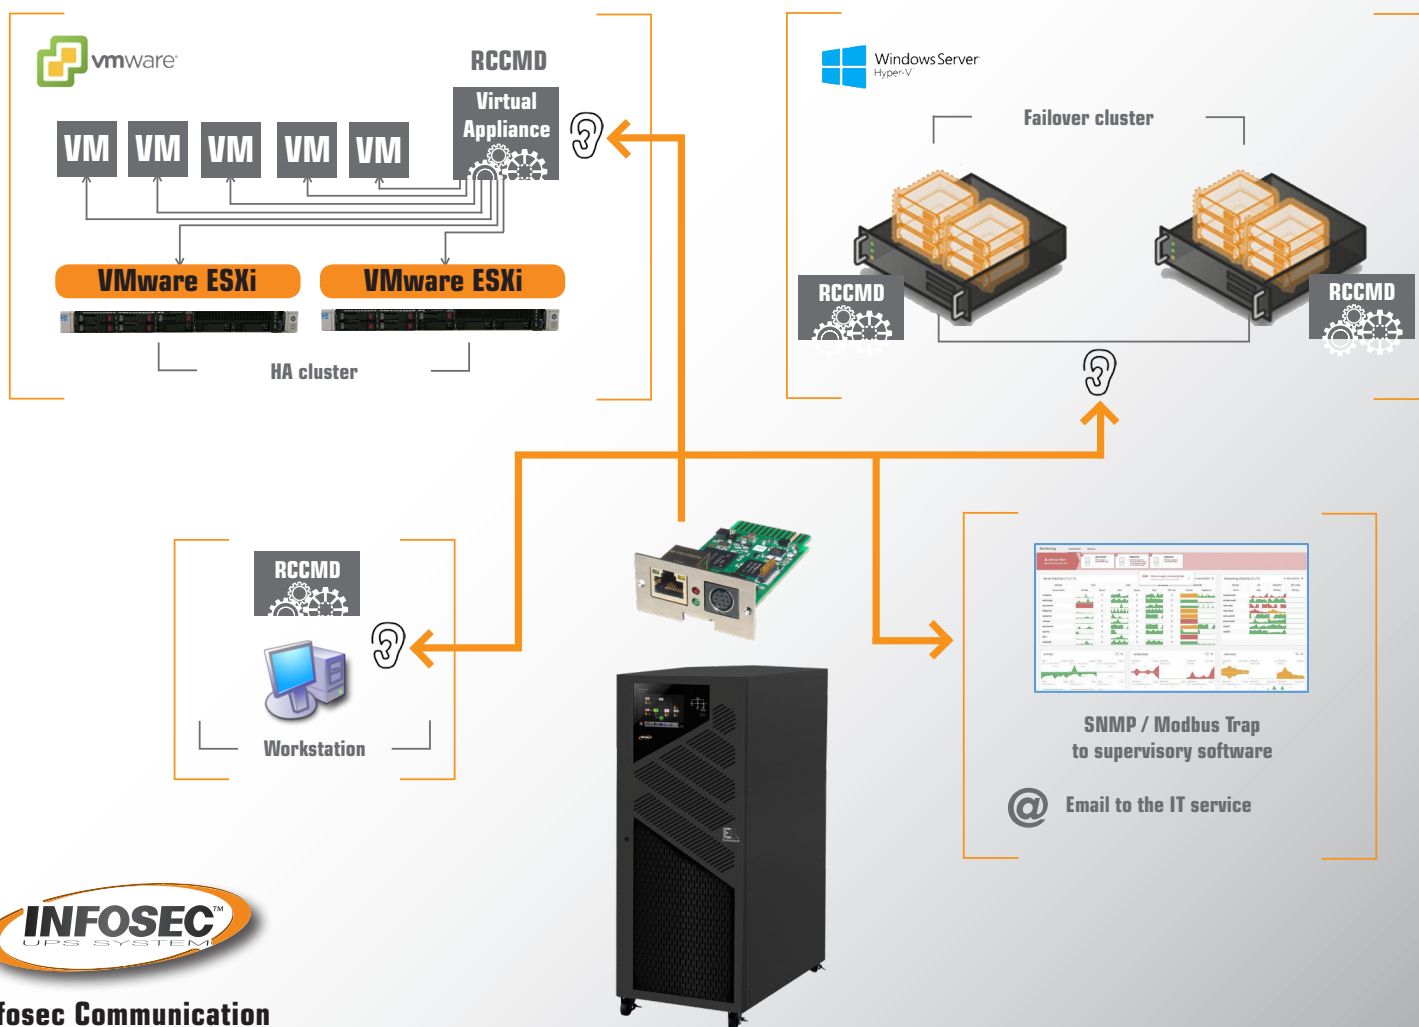

PN	Model	Compatibility	Type of installation
61142	SNMP vm Minislot card	All Online UPS equipped with a dedicated intelligent slot :	Integrable with UPS
61143	RCCMD client software	E3 Performance, E3 Pro RM / RT, E4 Value 4000 VA and more, E4 LCD Pro, E4 LCD Evolution, E4 Pro One, E6 LCD RT Evolution, E7 One, E4 Pro TM, E6 LCD TM RM, E4 Evolution II TT, Mod3, Mod5T / Mod5T E	Downloadable and installable

## Pre-sales & after-sales support

Infosec offers on demand a vmWare® certified support for pre-sales qualification but also a service for the installation and support of these solutions in dedicated environments. For more information, contact the hotline
